

A wood-burning stove is a lot more than just heating

Lifestyle - Tranquility - Reflection

2020 / 2021

Our products have always been about craftsmanship

Our products have always been about craftsmanship. VARDE Ovne was a smithy when we started out. This could be why a respectful understanding of craftsmanship is such a deep-seated part of our company. We never compromise on quality. On all our stoves, heat-exposed parts are made of solid cast iron. Extra trouble is always worth it when it comes to quality.

Your wood-burning stove is part of your furniture

Your wood-burning stove is an item you will see every day, so it is important that it matches your home. Producing a stove that is both functional and nice to look at is therefore integral to the design process. Scandinavian design is our source of inspiration. Simplicity, elegance, clean lines and visual harmony are just some of the stylistic features we try to achieve.

We thought about the environment on your behalf

We think it is important that our stoves are not an unnecessary environmental burden. We have therefore made sure that every single VARDE stove has been subjected to careful testing by independent testing agencies for environmental impact. This means that when you buy a VARDE stove, you are buying a stove that is compliant with the toughest environmental standards in Europe.

Guarantee

Every stove has various wear and tear parts which are expected to be replaced during the stove's service life. VARDE offers a five year guarantee against manufacturing errors and a six month warranty on selected wear and tear parts.

Read more at vardestoves.eu

All these features are included when you buy a VARDE stove

GLASS SIDE PANES

Several of VARDE's models feature large glass surfaces and side panes that let you enjoy the fire from various angles.

GLASS PANE CLEANING FUNCTION

All our stoves have pane-cleaning functionality that reduces soot formation on the glass when you operate the stove correctly.

EASY OPERATION

We have thought about the functional details. Air flow is easy to control and the fire chamber is easy to clean.

CONVECTION

All VARDE models are convection stoves, where the hot air is blown out from the top of the stove and distributed around the room.

HIGH COMBUSTION EFFICIENCY

Combustion efficiency is an expression of how much of the energy from the wood is exploited to heat the room. VARDE wood-burning stoves are all well-known for their combustion efficiency, which exceeds 80%.

THE ENVIRONMENT

All our stoves are CE certified, which means that they are compliant with Europe's toughest environmental legislation.

In other words, VARDE wood-burning stoves are also top-quality environmentally speaking.

CO₂ NEUTRAL

All VARDE wood-burning stoves are CO₂ neutral, which means that the wood has absorbed the same amount of CO₂ while growing in the wild as it emits during combustion.

Furthermore, the heat the stove produces replaces other forms of heating that could come from coal or oil.

CAST IRON AND STEEL

Exposed parts such as the smoke outlet and bottom grate on all VARDE wood-burning stoves are made of cast iron. That ensures longer service lives of the parts of the stove that are exposed to the most heat.

Some stoves also have a cast iron top plate and lid in keeping with the design. All VARDE wood-burning stoves have a fire chamber made of all-welded steel and are protected internally by cast iron and vermiculite.

AIR system

AIR model VARDE wood-burning stoves come ready for connection of an external air inlet for optimal firing and a better indoor climate – perfect for low-energy homes.

Convection system

Cool air is brought in via the bottom of the stove and heated air is discharged at the top. This ensures excellent air circulation inside the room and better heat distribution.

CO₂ neutral

All VARDEs wood-burning stoves are CO₂ neutral and characterised by high efficiency.

Grate disc

A grate disc at the bottom of the fire chamber allows you to finely separate the ash, which makes it easier to empty the ash pan.

Energy classification

The mandatory energy label contains information on the stove's energy classification and the direct heat output in kW.

MODEL

VARDE Nordic

Elegant series of wood stoves in a pure Nordic design, with lean rounded forms and top notch functionality and efficiency.

Better indoor climate thanks to Air system

Modern homes are very well-insulated. When using a wood-burning stove, you may experience that air in the room lacks humidity. It can also be difficult to achieve adequate air flow for combustion.

All our AIR models can be fitted with our Air system, which sucks air in from the outside. This can result in improved combustion, ensuring a proper, healthy indoor climate in your home.

VARDE NORDIC 3

Art. No. 101080

Colour	Black
Height	98 cm
Width	51 cm
Depth	45 cm
Output	5 KW
Firewood length	28 cm

NEW

VARDE NORDIC 7 AIR

Art. No. 101082

Colour	Black
Height	102 cm
Width	51x cm
Depth	44 cm
Output	6,2 KW
Firewood length	28 cm

Firewood length	28 cm

Soapstone retains the heat

The elegant Finnish soapstone cladding is of the very best quality and has the unique ability to store and emit heat long after you have stopped adding firewood.

Fireplace kit
A stylish and indispensable fireplace kit with poker, broom and dustpan.

Stove barriers
A stove barrier prevents kids, pets and even grown-ups from venturing too close to the hot stove.

Glass cleaner
For easy and effective cleaning of your stove's glass.

Fireplace glove
Effective protection against heat.

Spare parts and accessories

Our range of spares and accessories ensures optimum utilisation of the stove and makes daily life with a wood-burning stove easier and safer.

Top cover with logo
Cover the hole to the chimney pipe on the top of your stove with an elegant top cover.

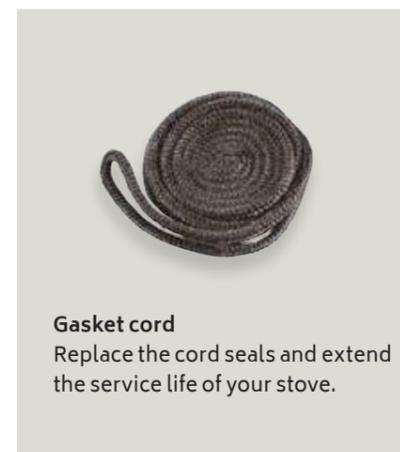

Ash pan
An ergonomically-designed ash pan that is also easy to clean.

Floor panels

Floor panels are not just a safety precaution these days; they are also an important component of the stove's overall finish. VARDE offers both steel and glass floor panels.

If the stove is placed on a floor made of flammable materials, the floor must be covered by a non-flammable material, such as a steel or glass plate or tiles.

If the stove is placed on a floor made of flammable materials, the non-flammable floor panel must be large enough to satisfy the minimum safety distances: 15 cm on the sides and 30 cm in front. However, 50 cm is recommended.

Gasket cord
Replace the cord seals and extend the service life of your stove.

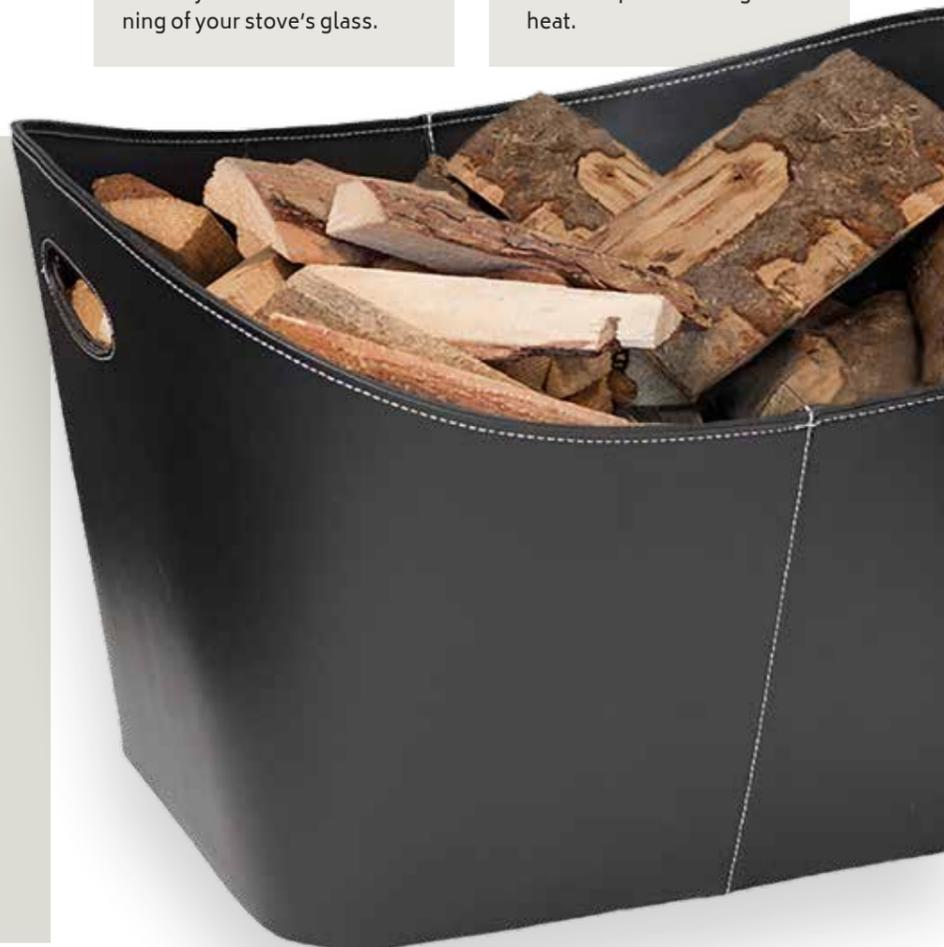

Cast iron bottom grate
Bottom grate made of solid cast iron with attractive, elegant and invisible joints.

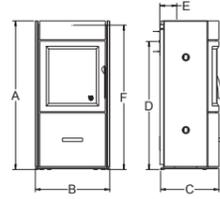

Tip Our baskets can hold much more than firewood. You can use them to store hats and gloves, newspapers, magazines, knitting materials or the children's toys.

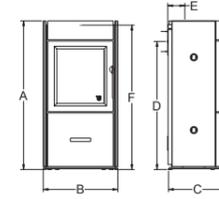

Baskets
Our range includes felt, rubber, metal and leather-look baskets.
